Revised

- A minimum of four (4) teams are required to get a team score in a sport

To ensure fairness for schools of different sizes, the total points earned by each school will be adjusted based on the potential points that a school could have earned, considering the number of sports they participated in.

**Calculation of Potential Points:**

Potential Points = Number of sports participated in \* Maximum possible points per sport

Example: If a school participates in 10 sports, and the maximum points per sport is 15 (for 1st place), the potential points would be 10 \* 15 = 150.

**Actual Points Earned:**

The total points a school earns based on their performance in the sports they participated in.

**Scoring Formula:**

Adjusted Score = (Actual Points Earned / Potential Points) \* 100

This formula calculates the percentage of points a school could have earned based on the sports they participated in.

**Points Earned**

- 15 points for 1st place
- 12 points for 2nd place
- 10 points for 3rd place
- 8 points for 4th place
- 6 points for 5th place
- 4 points for 6th place
- 2 points for 7th place
- 1 point for 8th place and below

**Calculation of Points**

- Initial Points: Calculate the initial points based on team performance.
  - Potential Points: Calculate the potential points based on the number of sports participated in.
  - Adjusted Score: Calculate the adjusted score using the scoring formula.
- The school with the highest adjusted score across all sports will be awarded the Director's Cup

**Minimum Requirements for schools to be eligible for the Director's Cup**

- AA Division - A minimum of ten (10) teams earning school points.
- A Division - A minimum of eight (8) teams earning school points.

Schools with teams in league sports that allow individual participation, such as cross country or track that but not enough to earn "school" points for school championship are not counted as a team towards the Director's Cup.
